National University of Computer and Emerging Sciences

Technical & Business Writing (SS2012)

Date:24th, February, 2026

Course Instructors

Nazia Imam, Javeria Ali,
Madiha Rehman, Mariam Aftab

Sessional-I Exam

Total Time: 1 Hour
Total Marks: 30
Total Questions: 04

Semester: SP-2026
Campus: Karachi
Dept: CS

Student Name _____ Roll No _____ Section _____ Student Signature _____

CLO #1: Utilize efficient writing style for producing an effective technical document.

Question 1: From the list of given titles of various writings, identify the genre by picking the right option from the options. Only write the genre name in the numbered form. Note: The genre can be repeated. **[3 marks]**

Literary	Journalistic	Technical	Academic

1. The Silent Patient **Literary**
2. Installation Guide for the ProMax 3000 **Technical**
3. Local High School Wins Debate Championship **Journalistic**
4. Advantages and disadvantages of online learning **Academic**
5. Tale of the Two Cities **Literary**
6. Financial Report: Revenue Analysis **Technical**

Question 2 A: Write answers for every aspect asked in every scenario in maximum five words.

1. A cybersecurity awareness manual is being written for non-technical administrative staff. Identify prewriting considerations related to: **[3 marks]**
   a) **Language level** non-expert
   b) **Organization** clear sections and subsections/chronological/step-by-step/bullets/visuals
   c) **Writer's purpose** to inform/ to instruct
2. A research protocol manual is being prepared for computational scientists and software engineers working on a high-performance computing project. Identify prewriting considerations related to: **[3 marks]**
   a) **Language level** Expert
   b) **Content selection** Detailed sections/Chronological/Technical specifications
   c) **Writer's purpose** to inform (without decision)
3. A strategic briefing report is being prepared for senior executives to facilitate informed decision-making regarding enterprise digital transformation initiatives. Identify prewriting considerations related to: **[3 marks]**
   a) **Language level** Semi-expert
   b) **Organization** summaries and abstracts/problem-solution/key findings
   c) **Writer's purpose** to inform (decision making)

Question 2 B: Select the correct option and write ONLY option number in your copy. [2 marks]

1. You use government reports and published research papers to support your proposal. These sources are:
   A. Secondary data B. Visual data
   C. Raw data D. Primary data

2. A manager complains that your report contains too many technical terms like "hash collision" and "multi-threading." Which prewriting mistake did you make?

A. Incorrect formatting
B. Poor proofreading
C. Lack of visuals
D. Ignoring audience analysis

3. A software manual includes a one-page summary for executives and a detailed appendix for engineers. This approach shows:
A. Informal style
B. Poor organization
C. Audience-centered writing
D. Redundancy

4. You have a hostile reader who opposes your new software project. How should you organize your data to be more persuasive?
A. Start withthe most controversial data first
B. Use only visual aids and no text
C. Organize from generally accepted data to less accepted data
D. Focus only on the historical background of the project

Question 3 A: Identify the organizational pattern used in each case: [4 marks]

1.	The evaluation discusses delays in system response time, explains how inefficient memory allocation contributes to the issue, and proposes an optimized memory-management strategy to improve overall performance.
2.	The usability review examines three software tools by analyzing their interface design, ease of learning, performance efficiency, and long-term scalability before concluding which tool best supports enterprise needs.
3.	A campus orientation guide describes a building by starting at the ground floor, moving upward to classrooms on the second floor, and ending with the library on the top floor.

1. **Problem solution**
2. **Compare and contrast**
3. **Spatial**

Question 3 B: Revise the following sentences as per the instructions provided in the parenthesis. [7 marks]

1. The program sends data to the server after it processes it.(pronoun reference)
   The program sends data to the server after **the application** processes **the data**.
2. The database was updated incorrectly.(clarity)
   The database was updated incorrectly because **the primary key constraint was removed during migration**.
3. A programmer should test his code before deployment. (write 2 sentences with 2 different strategies to make this sentence more gender friendly)
   A programmer should test his/her code before deployment.
   All programmers should test their code before deployment.
   Programmer should test the code before deployment.
   You should test your code before deployment.
4. The system executes a low-latency I/O-bound architectural workflow.(language)
   The system is designed to **process input and output quickly**.
5. The memory usage is high. (preciseness)
   The **Inventory Management System (IMS)** uses **850 MB of RAM during idle operation**, which exceeds the **500 MB baseline requirement**.
6. The CPU load increased after the OS update. (clarity)
   The **CPU load**, defined as the **percentage of processor capacity in use**, increased from **35% to 75%** after the **Windows 11 operating system update** was installed.
7. It is important to note that the program has the ability to handle multiple users. (Economy)
   The program **supports up to 100 concurrent users**.

Question 4: Read the following four source excerpts and write <u>a single coherent paragraph</u>, using all sources of information, (120–150 words) that synthesizes the main ideas.

i. **Use appropriate IEEE in-text citations.**
ii. **Use all the three techniques: summarization, paraphrasing, and quotation.**
iii. **Create a reference list.**

Source A; Author(s): Zhang, Y., & Lee, H.; **Publication Year:** 2021
The rapid growth of the Internet of Things (IoT) has increased security risks because many IoT devices lack strong protection mechanisms. Weak authentication and poor encryption make these devices vulnerable to cyberattacks. As a result, organizations must implement better security policies and device management strategies to protect their networks.

Source B; Author(s): Kumar, R., & Singh, P.; **Publication Year:** 2020
IoT enables smart home automation by connecting devices such as sensors, cameras, and appliances to the internet. These devices improve convenience, efficiency, and energy management. However, insecure devices can expose personal and organizational data to unauthorized access if proper security measures are not applied.

Source C; Author(s): Ahmed, S.; **Publication Year:** 2022
Users play a critical role in IoT security. Many security breaches occur because users fail to update device software or use weak passwords. Therefore, user awareness and proper training are essential to ensure the safe and secure use of IoT technologies.

Source D; Author(s): Ali, M., & Khan, T.; **Publication Year:** 2023
Organizations must adopt a comprehensive approach to IoT security that includes technical solutions, employee training, and clear security policies. Effective planning and risk assessment can help organizations benefit from IoT technologies while minimizing potential security threats.

Rubric:

1. Synthesis Techniques (Quoting, summarizing, Paraphrasing) = 1+1+1 marks
2. Logical flow and Coherence = 1 mark
3. Correct In-text Citation = 1 mark
4. Using all resources and reference list= 0.5+0.5 mark
