

UML class diagrams

UML class diagrams

- What is a UML class diagram?
- class diagram: a picture of the classes in an OO system their fields and methods connections between the classes that interact or inherit from each other
- What are some things that are not represented in a UML class diagram?
- details of how the classes interact with each other algorithmic details; how a particular behavior is implemented

UML class diagrams

- class name in top of box
- use italics for an abstract class name attributes (optional)
- should not include inherited method

Class attributes

- attributes (fields, instance variables)
- visibility name : type = default_value
- visibility:
 - + public
 - # protected
 - - private
 - / derived
- underline static attributes
- attribute example: - balance : double = 0.00

Class operations / methods

- operations / methods
- visibility name (parameters) : return_type
- visibility:
 - + public
 - # protected
 - - private
- underline static methods
- parameter types listed as (name: type)
- omit return_type on constructors and when return type is void
- method example: + distance(p1: Point, p2: Point): double
